Communication interfaces of the Saia® PCD2.M5xxx controllers

In addition to the On-Board interfaces of Saia® PCD2, the interface functions can also be extended in a modular way by means of the various slots. Numerous protocols are therefore supported by the PCD2.M5xxx series. The physical bus specifications are offered for the majority of protocols as a plug-in module. If this is not the case, the bus can be connected via an external converter.

Protocols supported by the PCD2.M5xxx via FBoxes

- ▶ Modem communication with the PCD
- ▶ HMI editor applications with PCD7.Dxxx text terminals
- ▶ Serial S-Net (S-Bus)
- ▶ Modbus
- ▶ JCI N2-Bus
- ▶ KNX® S-Mode/EIB (with external converter)
- ▶ DALI
- ▶ EnOcean (with external converter)
- ▶ M-Bus
- ▶ BACnet®

System properties of PCD2.F2xxx modules:

The following points must be observed when using the PCD2.F2xxx interface modules:

- ▶ For each PCD2 system, up to 4 PCD2.F2xxx modules (8 interfaces) can be used in slots 0...3.
- ▶ The PCD2 system has a processor to look after both the application and the serial interfaces. Processing of the interface modules requires the appropriate CPU capacity.
- ▶ To determine the maximum communication capacity for each PCD2.M5 system, consult the information and examples provided in Manual 26/856 for PCD2.M5.
